

Life Explosions

Big Bang at Powtech

Picture: Rembe

Rembe Safety & Control protects plant engineering and apparatus construction in the global industries of food processing, woodworking, chemicals and pharmaceuticals from dust explosions. In this field, and as an owner-managed company located in Brilon, Germany, Rembe is on the forefront of development and is one of the companies which sets technological benchmarks within the industry. The comprehensive array of explosion protection products range from explosion vents over conventional explosion venting, right up to protective flameless venting sys-

tems for closed areas. Devices for explosion suppression and explosion isolation are available either as individual components and/or as a system solution. Every day at 1:00 pm, Rembe has a real blast on the Powtech's open-air grounds. During their live explosion demonstrations, the company's engineers will show exactly what the explosion protection products are capable of when worst comes to worst. The live demonstrations are carried out at the Powtech 2011, which takes place from October 11th to 13th, 2011. ■
